# KerioControl

Kerio Control Box Hardware Appliance

Protect your network from viruses, malware and malicious activity with Kerio Control Box. This easy-to-administer security solution includes a firewall and router, intrusion detection and prevention (IPS), gateway antivirus, VPN and content filtering.

What is Kerio Control Box?

Kerio Control Box is a UTM appliance that integrates Kerio's award winning Kerio Control software with specially matched hardware to create a complete network security solution for small to mid-sized organizations. It is based on the latest version of the Kerio Control software and uses Kerio's proprietary linux-based operating system, found in the software appliance edition of the product.

Kerio Control Box bundles all of the security technologies that are available as options in Kerio Control, namely Sophos Anti-Virus and Kerio Control Web Filter.

Network Firewall, Router and Leading-Edge IPS

Preserve the integrity of your servers with deep packet inspection and advanced network routing capabilities -- including simultaneous IPv4 and IPv6 support. Create inbound and outbound traffic policies, restricting communication by specific URL, traffic type, content category and time of day.

Industry-Leading Web and Content Filtering

Selectively block, allow or log access to 141 continuously updated categories of content with the optional Kerio Control Web Filter service. Keep your users from visiting malware sites that are known to contain viruses and spyware or to engage in phishing or identity theft.

Advanced Sophos Gateway Antivirus

Keep viruses, worms, trojans and spyware from infesting your network with integrated Sophos Gateway Antivirus.

Productivity-Boosting Usage Reporting

View individual users' Internet activity, refine traffic-shaping rules and more with automatic, detailed reports from Kerio Control Statistics sent to your email inbox.

Secure VPN

Link headquarters to remote users and branch offices securely and easily. Use industrystandard IPsec/L2TP for connectivity from mobile devices or third-party firewalls. Enable 2-step verification for an extra layer of security on all forms of remote access.

Choose the hardware appliance box that meets your performance requirements:

KERIO CONTROL BOX NG100   KERIO CONTROL BOX 1120   KERIO CONTROL BOX 3130
